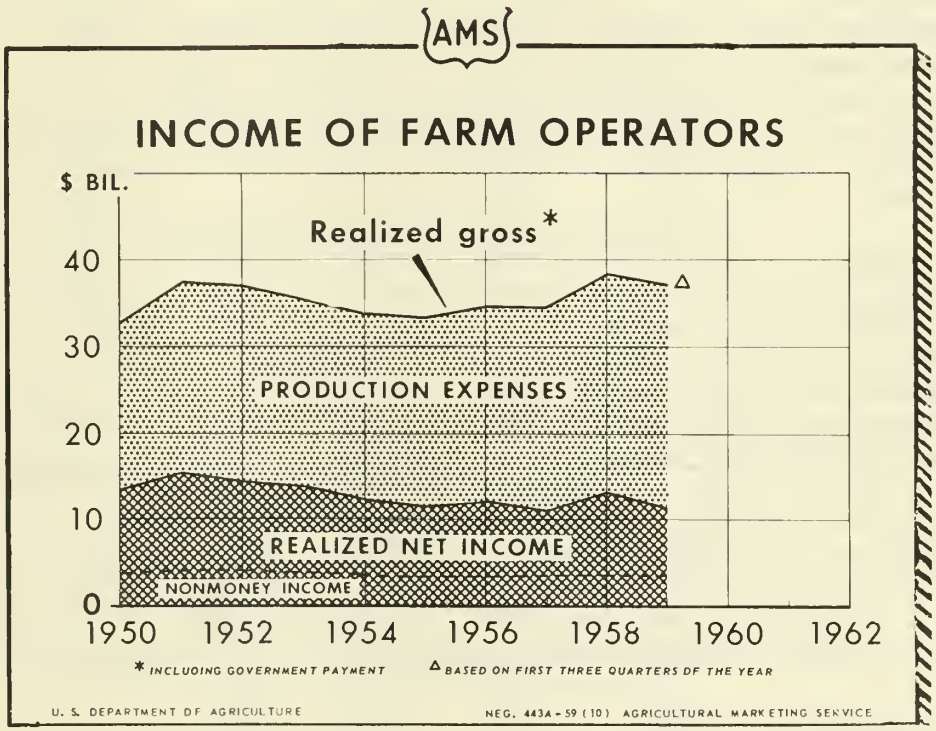
The FARM INCOME SITUATION

LIBRARY
CURRENT SERIAL RECORDS
NOV 30 1959
U. S. DEPARTMENT OF AGRICULTURE

FIS-176



Farmers' realized net income was at an annual rate of 11.2 billion dollars in the first 3 quarters of 1959, down 15 percent from the corresponding period in 1958. However, the 1959 rate remained slightly above the 1957 estimate of 11.0 billion dollars. Realized gross income has declined so far this year, and production expenses have risen.

Realized gross and net income both increased from 1950 to 1951, but then declined every year until 1956. They dropped off again in 1957, but realized gross income jumped 11 percent in 1958, and realized net income 19 percent.

Production expenses also rose sharply in 1951, and again in 1952. They declined some in 1953, but have since climbed steadily to nearly 26 billion dollars this year.

FARM INCOME IN 1959 AND OUTLOOK FOR 1960

Farm income is down this year almost as much as it was up last year. The further decline expected in 1960 is likely to be much smaller than the drop occurring this year.

A 3-percent decline in realized gross income so far this year, with production expenses up 3 percent, is bringing about a decline in farmers' realized net income. Prices received by farmers have averaged 3½ percent under a year earlier, with substantial declines in prices of hogs, broilers, and eggs. Total volume of sales has been up slightly. Some further slight decline in average prices is indicated next year, primarily associated with larger marketings of cattle and hogs and modest reductions in price support levels for some crops. This year, production cost rates to farmers have averaged 2 percent above 1958, although holding essentially stable since January. For 1960, prices paid by farmers for production items, and total production expenses, may rise a little more. Price declines for products of farm origin such as feed and feeder livestock may largely offset further price increases for some industrial products. But continued increases in overhead costs such as interest, taxes, and depreciation will likely raise total production expenses.

In the first 3 quarters of 1959, the seasonally adjusted annual rate of realized net farm income was 11.2 billion dollars compared with 13.1 billion in the same period of 1958. (See table 1.) This contrasts with an increase of over 2 billion dollars in realized net income from 1957 to 1958. The decline this year results from lower receipts from marketings, higher production costs for the sixth year in succession, and a substantial drop in Soil Bank payments resulting from the elimination of the acreage reserve program. Farm inventories, particularly of cattle, are rising substantially this year as ranchers continue to withhold from market and to build up herds. Some additional buildup in cattle numbers appears likely next year. For 1960, a further decline in realized net income is in view, perhaps about half as much as the drop this year, involving slightly lower cash receipts and a slight increase in production expenses. On the other hand, the income of farm people from nonfarm sources, which in 1958 accounted for 28 percent of their total net income, increased this year and will likely rise further in 1960.

The decline in realized net income this year reflects (1) a drop of some three-quarters of a billion dollars in cash receipts from marketings, (2) a reduction of a half billion dollars in Soil Bank payments as expansion of the conservation reserve only partly offset elimination of the acreage reserve, and (3) an increase of nearly three-quarters of a billion dollars in production expenses, including a substantial rise in expenditures for feeder livestock.

Cash receipts from farm marketings were reduced some 2½ percent in the first 9 months of 1959. Much of the decline occurred in the third quarter, when the smaller wheat crop this year and lower prices for hogs, eggs, and broilers were particular factors. On a seasonally adjusted annual rate basis, cash receipts were 32.7 billion dollars for the first 3 quarters of 1959. Cash receipts for the year are also expected to total about 32.7 billion dollars, including 14.2 billion from crops and 18.5 billion from livestock and livestock products. The decline is mainly in livestock receipts, with crop receipts nearly the same as in 1958. Cash receipts from crops are substantially lower in the case of wheat, sorghum grain, peanuts, and soybeans, but these declines are largely offset by a substantial increase for cotton and smaller increases for corn, tobacco, and oranges. In the livestock group, cash receipts from wool are higher, and those from cattle and calves and from dairy products are showing little change. But receipts from hogs, eggs, and broilers are down substantially.

Next year, cash receipts may show a smaller reduction than this year, with receipts from cattle and hogs probably down some as a result of lower average prices. In addition, receipts from wheat probably will be lower, reflecting the spill-over of marketings from this year's smaller crop in the first half of 1960--compared with marketings from last year's record crop in the same period of 1959--as well as some reduction in the price support level for 1960 crop wheat. Cash receipts from other commodities may not show much change; those from milk and eggs may well show some gain.

CURRENT ESTIMATES

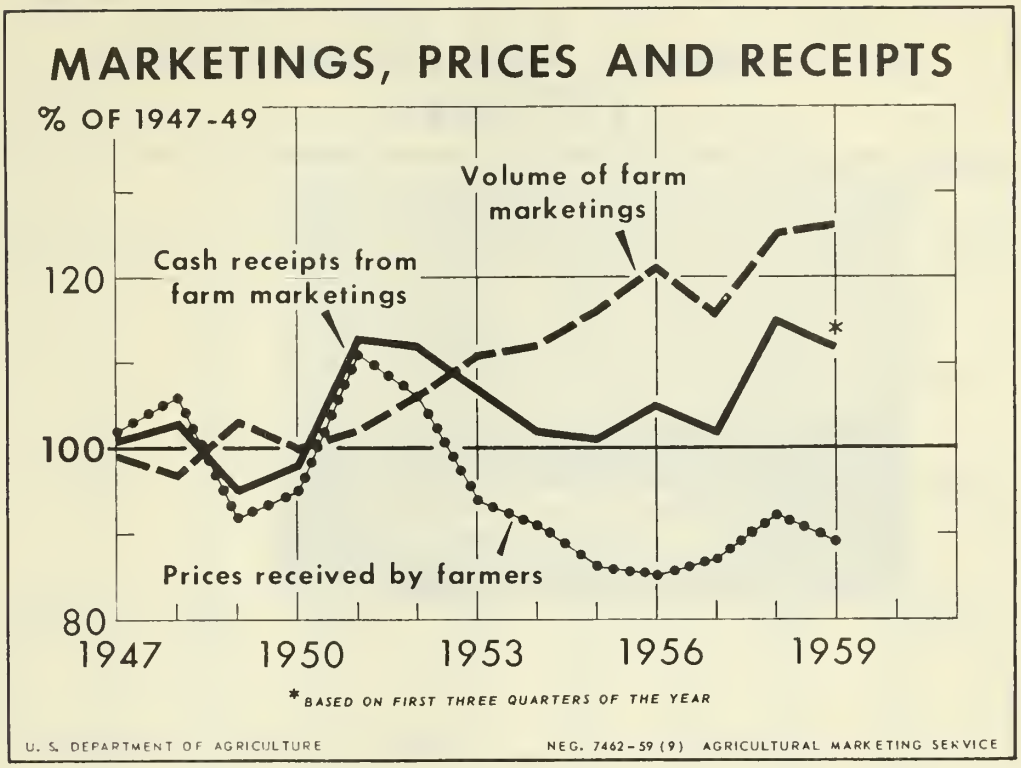
Volume of marketings in 1959

The physical volume of farm marketings will likely set a new record high this year, nearly 2 percent above the previous record in 1958. Based on conditions as of November 1, marketings this year are expected to total 127 percent of the 1947-49 annual average volume as compared with 125 percent for 1958. (See chart on page 5 and table 2 on page 7.)

The increase in total marketings this year is due mostly to larger sales of hogs, poultry, and eggs. Total crop marketings are about unchanged from last year, with a sharp decline for wheat about offset by an increase for cotton. Sales of poultry and eggs are setting a new record high for the fourth year in a row, and total sales of meat animals are only a little below their 1956 record.

Cash receipts in September and October

Farmers received 3.2 billion dollars from marketings in September, 3 percent below receipts in September 1958. (See table 3.) Cash receipts in



October are tentatively estimated at 3.7 billion dollars, 1.9 billion from crops and 1.8 billion from livestock and products.

OUTLOOK CHARTS ON FARM INCOME

The 1960 issue of Agricultural Outlook Charts includes four charts relating to farm income. One is reproduced on the cover of this report, one on this page, and the other two on page 6. Three of the four charts include preliminary estimates for 1959 based on seasonally adjusted data for the first three quarters. Estimates for the lower chart on page 6, comparing farm and nonfarm per capita incomes, which include for farm people income from nonfarm sources as well as from farming, are available only through 1958 at this time.

The chart above shows the record volume of farm marketings this year, and also the generally offsetting influence of lower average prices and larger marketings on cash receipts since 1951. The top chart on page 6, showing realized net income as a percentage of realized gross income, clearly indicates how rising production cost rates and increased quantities of purchased inputs have combined to take over a major share of the gross income dollar. In 1959, farmers are retaining as net income only 30 percent of their gross income. This is equal to the 1932 record low percentage of net income retained.

The lower chart on page 6 shows the 1958 record high of income per person on farms from all sources ($1,066). Although income of farm people from nonfarm sources is higher this year than in 1958, this is certainly outweighed by the decline in farm income, so per capita income for persons on farms from all sources will be down some this year from the 1958 high.
